

the Filtersorb SP3

THE GREEN WATER CONDITIONING PROCESS

BOYETT FAMILY RAYNE WATER CONDITIONING UNDERSTANDS THE IMPORTANCE OF BEING ENVIRONMENTALLY RESPONSIBLE.

Introducing a new water conditioning system, the Filtersorb SP3.

WHAT SETS THE FILTERSORB SP3 APART FROM OTHER SYSTEMS?

- Maintenance Free
- No Release of Harmful Minerals or Chemicals
- Reduces Energy Consumption
- **NO ELECTRICITY REQUIRED!**
- Preserves Beneficial Minerals
- Eliminates Chlorine
- Salt Free
- Reduces Soap & Chemical Use by 30-40%
- Eliminates Existing Scale

HOW DOES THE FILTERSORB SP3 SYSTEM WORK COMPARED TO CLASSIC WATER SOFTENERS?

Classic water softening units operate through ion exchange. Through this process calcium and magnesium ions are exchanged with an equal amount of sodium. This creates sodium content in the water supply.

The Filtersorb SP3 works via nanotechnology. Water passes through the tank and through the fluidized Filtersorb SP3 media. The media acts as a catalyst and the hardness minerals (calcium and magnesium) are transformed into Nano particles or crystals. These Nano particles pass through plumbing lines, fixtures and appliances without attaching. This process also eliminates existing mineral build up. In a few short weeks of using this system, you will see the pre-existing build up disappearing.

THE RESULT: 99% SCALE PREVENTION WITHOUT ADDING HARMFUL MINERALS OR CHEMICALS INTO OUR ENVIRONMENT!
